

Professional background of Dr. med. Horst Kief

After studying in Heidelberg, Kiel and Freiburg and completing his dissertation in the Radiology Institute of the University of Freiburg, at the beginning of the 1970s, Dr. Kief settled in Ludwigshafen as a specialist after a few years of medical practice.

Since then, the further development of the natural and complementary medicine and their symbioses with conventional medicine has been the focus of his scientific and practical work. Many of his procedures developed there have become a standard today.

One of the therapies developed by Dr. Kief was the hyperbaric ozone oxygen therapy, with which a great number of therapists are working all over the world. In 1978 he managed to clinically demonstrate the metabolic effects of this therapy on the parameters of cholesterol, triglycerides and uric acid. In 1983, the immunomodulatory effect of ozone-oxygen composites on chronic hepatitis was demonstrated. One year later, a catalytic chain reaction through O₂/O₃ composites in the human blood and their use in the early detection of cancer was discovered. Dr. Kief also successfully demonstrated the statistical evidence of remissions of the cellular immune situation in HIV patients with the hyperbaric ozone oxygen therapy.

In 2005 he developed the culture transformation test (KT-Test) which was to set a new milestone in optimising the diagnosis of all disorders which can be treated with AHIT. Due to its extremely high efficiency, the culture transformation test is also used in other investigations: more than 300 various bacterial, viral or allergenic pathogens (antigens and antigen combinations) can be compared and contrasted on their scale. This provides the therapist with an insight into the individual immunological happenings. The triggers or even co-factors of diseases are recognised and can be transformed into diagnostic statements.

Dr. Kief has written a multitude of publications in national, scientific and medical journals and was invited to give around 300 professional presentations at national and international congresses as a recognised expert.

He has developed more than 25 patents, including some in the medical, immunological field. Dr. Kief has been a scientific consultant in the company FBM-PHARMA GmbH since 1995 and today offers his expertise to the natural and complementary medicine division of Vaccentis AG.
